Bojji Dilip Krishna

Akhil Pedapalli

Jitendra Singh

Ravi Kumar Patel

- # PROJECT DEFINITION

Travel Diaries is a Geo-Tagging Social Networking Android Application which focuses on helping people socialize and discover the undiscovered.

- # TECHNICAL REQUIREMENTS

Android Application Development for End User
Python based Django framework for Server and Backend Administration
Version Control System - Git for the Project Management
Postgre SQL for the Database Management System

- # MARKET SCOPE

Such system is not existing as of now which is the USP of our Platform. This platform would be robust and scalable to attract the market. As people tend to value the reviews of their friends, acquaintances, colleagues and their fellow mates, the content published on it would be trusted and thus a helpful source of information.

- # REASON FOR ACCEPTANCE

The Pros of the Application have outweighed the Cons and therefore we have accepted the idea. The idea is very much scalable as well.
